

注意! TCG

Zombie Mode

When a player has 5 Poison Cards, the dealer will give them a Zombie Mode Card. The card must be placed in front so that all other players know that the infected player is now a Zombie. Players in Zombie Mode, may not use any of their Character Cards awhile in Zombie Mode. Also, the player in Zombie Mode can not win or take a Stability Crystal Card (They must change back to regular mode before taking the Stability Crystal Card). Players in Zombie Mode must use only the Zombie attacks on the Zombie Mode card.

- **HP:** 40 (However, can increase through Vitality card only)
- **Attack:** Zombie deals Poison Attack called Venom Strike and if the Zombie is successful in its attack, the losing opponent will receive one Poison Card.
- **Antidote:** Will stop Zombie Mode. An Antidote card can be placed only by the infected player. Antidote is used for self heal.
- **Poison:** More Poison Cards can be placed on an infected player in Zombie Mode (Placement of cards can be from infected players or other players) This strategy helps the player to continue to be in Zombie Mode to avoid being killed.
- **Retreat:** Zombies are super slow
- **Weakness:** Lightning and Fire

Revival Rules:

If Zombie HP is depleted to 0, then...

Zombies will revive at 10 HP (5 Poison Cards)

Zombies will revive at 20 HP (6+ Poison Cards)

Zombies will revive at 40 HP (8+ Poison Cards)

Zombies can infect other players just by successfully attacking another opponent. If the Zombie is successful in its attack, the defendant will receive one Poison card and follow the rules of the Poison card. A player with one Poison Card will continue to receive -10 or -20 (depending on which Poison card they receive) each and every round until they obtain an Antidote card.

Zombies can not be killed by regular and BLITZ Character Card attacks and even if a Character Card destroys them, they will come back to life. Zombies receive +10 HP each round regardless if they take damage or not. Kontrol Card will not work on Zombies since they have no mind.

Once another player takes off one Poison card from the total of five Poison Cards, the infected player is no longer a zombie. They will discard the Zombie Mode Card to the current dealer and go back to the HP they had before they turned into a Zombie. All Poison Cards at this time are still valid and will continue to take effect for as long as they have it.

Fire attacks, Fire Cards, Lightning Cards, or Lightning Attacks will remove a Poison card when the infected player is in Zombie Mode, but will not remove a Poison Card in regular mode. The Fire and Lightning attack will still deal damage.

Zombie Mode

When a player has **5 Poison Cards**, they immediately enter **Zombie Mode**.

The dealer gives that player a **Zombie Mode Card**, which must be placed face-up in front of them so all players know they are infected.

While in Zombie Mode, the following rules apply:

Character Restrictions

- The player **cannot use any Character Cards** or Character Card abilities.
- All attacks must come from the **Zombie Mode Card**.
- Character-specific skills, passive effects, transformations, and ultimate attacks are disabled while in Zombie Mode.

Winning Restrictions

- A player in Zombie Mode **cannot claim or win a Stability Crystal Card**.
 - If a Zombie would earn a Stability Crystal Card, they **cannot take it** until they are cured and return to Regular Mode.
-

Zombie Stats

Starting HP: 40 HP

- Zombie HP may still increase through **Vitality Cards**, **Heal Cards**, or other effects that restore HP.
 - At the beginning of each of the Zombie player's turns, they automatically recover **+10 HP**, even if they took damage during the previous round.
-

Zombie Attack

Venom Strike

The Zombie's primary attack is **Venom Strike**.

If Venom Strike successfully defeats or damages an opponent according to your game's attack rules:

- The defending player immediately receives **1 Poison Card**.
- That Poison Card follows all normal Poison Card rules.

A player with Poison Cards continues to lose **10 HP or 20 HP each round**, depending on the Poison Card's effect, until they use an **Antidote Card**.

Infection

Zombies spread the virus through combat.

Whenever a Zombie successfully lands a Venom Strike:

- The defending player gains **1 Poison Card**.
 - Once a player reaches **5 Poison Cards**, they immediately enter Zombie Mode.
-

Antidote

An **Antidote Card** cures Zombie Mode.

Rules:

- Only the infected player may play an Antidote on themselves.
 - Antidotes cannot be played on another player unless another card specifically allows it.
 - Once enough Poison Cards are removed so the player has **fewer than 5 Poison Cards**, they immediately leave Zombie Mode.
-

Additional Poison

Players already in Zombie Mode may continue receiving additional Poison Cards.

These Poison Cards may come from:

- Other Zombies
- Other players
- Card effects

This can be used as a defensive strategy to delay being cured and remain in Zombie Mode longer.

Retreat

Retreat Cost: High

Zombies are extremely slow.

Unless another card effect states otherwise:

- Zombies may only retreat once per turn.
- Zombies cannot perform free retreats.

(You may replace this with whatever retreat system your game uses.)

Weaknesses

Weakness: Fire ⚠️ and Lightning ⚡

Fire and Lightning are especially effective against Zombies.

Whenever a Zombie is hit by a Fire or Lightning attack:

- The attack deals its normal damage.
- The Zombie also removes **1 Poison Card**.

Important:

Fire and Lightning only remove Poison Cards while the player is in Zombie Mode.

They do **not** remove Poison Cards from players who are still in Regular Mode.

Zombie Resilience

Zombies are extremely difficult to eliminate.

- Zombies **cannot be permanently defeated** by regular Character Card attacks or BLITZ Character Card attacks.
- If a Zombie's HP reaches 0, they immediately revive instead of being eliminated.
- Their automatic **+10 HP regeneration each round** still applies after reviving.

(You may wish to specify whether they revive with 10 HP, 40 HP, or another value to avoid ambiguity.)

Mindless

Because Zombies have lost their minds:

- **Kontrol Cards have no effect** on Zombies.
 - Any card or ability that controls, manipulates, or steals a Zombie also fails unless specifically stated otherwise.
-

Returning to Regular Mode

A Zombie immediately returns to Regular Mode when they have **fewer than 5 Poison Cards**.

When this happens:

1. Discard the Zombie Mode Card to the dealer.
2. The player returns to the exact HP they had immediately before entering Zombie Mode.
3. Any remaining Poison Cards stay attached to that player.

4. Those remaining Poison Cards continue dealing their normal damage each round until removed with an Antidote or another card effect.
-

Design Suggestions

Here are a few ideas that could make Zombie Mode even more exciting:

Zombie Fury

If the Zombie has **8 or more Poison Cards**, Venom Strike deals **+10 damage**.

Hunger

A Zombie cannot use Heal Cards unless the card specifically says it can heal Zombies. This makes the regeneration ability their primary source of recovery.

Undead Rage

The first time each round a Zombie would be reduced to 0 HP, they instead remain at **1 HP**. (This prevents repeated knockouts before regeneration.)

Infection Chain

If a Zombie defeats a player with Venom Strike, that player immediately gains **2 Poison Cards** instead of 1.

Headshot Rule (Optional)

Only Fire or Lightning attacks can permanently defeat a Zombie. If a Zombie reaches 0 HP from Fire or Lightning damage, they do not revive. This creates a unique strategy for players and gives Fire/Lightning decks a valuable role without making Zombies unstoppable.

Overall, Zombie Mode has the feel of a "boss transformation" mechanic. Tightening the wording and clearly defining edge cases (such as revival HP, retreat limits, and cure timing) will make gameplay smoother and reduce disputes during matches.
